United States

Hi,

Please accept this letter as part of my application for a position on your team as a Software Engineer at Dropbox.

I am a self-starting and driven person, who can offer you an entirely self-taught software development background. In my current role, I've initiated and delivered multiple full stack python web applications with complete autonomy. The latest, "Richard", will be most representative of where my skill-set is today. It is adopted and relied upon by multiple project teams within my company to deliver structural engineering services for a \$10B, 6,000,000 sq-ft airport terminal.

I'm specifically interested in opportunities where I can work within a team, whom with I share a common vision, and develop a technology product. I have no doubt that working alongside the technical talent at Dropbox would afford me the opportunity to challenge myself and deepen my software development knowledge. Although I don't come from a formal software engineering background, I find challenges of scale endlessly interesting, and have made them my focus within the context of my current organization for the past three years.

My resume, linkedin profile, and personal website are included in my application. I would like to share a link or source code for any of my work, but the intellectual property is that of my current company. Should you be interested in granting me an opportunity to interview, I can live demo my work and speak to my code in detail. I very much appreciate you taking the time to consider me for a position on your team. I hope we speak soon.

Respectfully,

Thomas Shouler
